

SRIDHAR CHILUKURI

Staff Software Engineer • Distributed Systems • Backend Platforms • Cloud Infrastructure

Erie, CO | 718-578-5199 | sridharchilukuri9@gmail.com | linkedin.com/in/sridharchilukuri

SUMMARY

Staff software engineer with 12+ years of experience designing distributed systems, high-throughput APIs, event-driven data pipelines, and cloud-native backend platforms. Leads ambiguous initiatives from requirements through architecture and delivery, with demonstrated impact across billion-record data stores, tens of terabytes of daily processing, sub-100 ms services, and more than \$3M in annual cloud savings. Builds dependable infrastructure where scale, latency, operability, and engineering leverage matter.

CORE TECHNOLOGIES

Languages: Go, JavaScript, TypeScript, Python, C#, SQL

Backend: Distributed Systems, Event-Driven Architecture, Microservices, REST APIs, gRPC, Data Pipelines

Cloud & Infrastructure: AWS Lambda, ECS/Fargate, API Gateway, S3, SQS, SNS, Terraform, Docker, Kubernetes

Data & Observability: PostgreSQL, DynamoDB, Redis, OpenTelemetry, Splunk, CloudWatch

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Jun 2021 – Present

Proofpoint

Erie, CO

- **Led architecture and backend delivery for an event-driven remediation platform** used by thousands of enterprise customers, integrating WHOIS intelligence, detection APIs, and asynchronous data pipelines.
- **Re-architected the entire lookalike domain detection pipeline** — including the image-matching component on AWS ECS/Fargate using CLIP embeddings — reducing processing latency from days to hours and annual AWS spend from \$3.6M to under \$500K.
- **Designed a real-time ingestion platform** for newly registered domain feeds, DNS zone files, email traffic, and Certificate Transparency logs, creating a shared PostgreSQL data layer with 1B+ WHOIS records.
- **Built and scaled a company-wide WHOIS API** to millions of daily requests at sub-100 ms latency, using Redis caching for high-volume consumers across multiple platforms.
- **Engineered a microservices data pipeline** processing tens of terabytes of telemetry daily, with OpenTelemetry instrumentation and centralized operational visibility in Splunk.
- **Founded and led an API working group across 4–6 engineering teams**, defining governance standards and architecture reviews for backend services exceeding 100K transactions per second; mentored engineers across teams.

Senior Software Engineer

Mar 2019 – Jun 2021

EBSCO Information Services

Boulder, CO

- **Led the migration of licensing capabilities** from a monolithic platform to an AWS serverless architecture, translating global subscription rules into real-time backend APIs.
- **Directed a zero-downtime data migration** and modernized CI/CD workflows while maintaining uninterrupted license validation for downstream applications.

Software Engineer

Apr 2016 – Mar 2019

Pertan Group

Fort Collins, CO

- **Delivered mission-critical web and Windows systems** for government and military clients, emphasizing reliability, maintainability, and controlled access.
- **Built inventory and asset-management applications** in C#, WPF, TypeScript, and Angular, integrating client workflows with a centralized identity server.

Software Developer

Apr 2012 – Nov 2013

Winnow IT Services

Hyderabad, India

- **Developed B2B web applications** and reusable, responsive interface components using ASP.NET, C#, JavaScript, and SQL.

EDUCATION

M.S., Electrical Engineering — *University of Missouri–Kansas City*

2014 – 2016
